AMPYRA® (dalfampridine) is the only branded prescription medicine indicated to help improve walking in adults with multiple sclerosis (MS). This was demonstrated by an increase in walking speed.

**Selected Important Safety Information**

Do not take AMPYRA if you:
- have ever had a seizure,
- have certain types of kidney problems, or
- are allergic to dalfampridine (4-aminopyridine), the active ingredient in AMPYRA.

Take AMPYRA exactly as prescribed by your doctor.

*Please see Important Safety Information on page 10.*
WHY WAIT?
ASK YOUR DOCTOR
ABOUT YOUR WALKING DIFFICULTY

In a poll of more than 2,000 people with MS, 87% of respondents said they experienced some limitation to their walking ability and limited activities that involved walking.*

According to a survey of more than 1,000 US adults with MS, about 46% experienced walking difficulty at least twice a week.†

Of those who experienced walking difficulty, nearly 2 in 5 (39%) said they experienced mobility issues by the time they were diagnosed with MS.‡

* According to a 2008 poll, A Patient Survey of Mobility and Exercise Issues Among MS Patients, commissioned by Acorda Therapeutics, Inc. and the Multiple Sclerosis Association of America.

† According to a Harris Interactive poll commissioned by Acorda Therapeutics, Inc. and the National MS Society. July 29, 2011.

Nobodoy likes to admit they have an issue. You always want to kind of put on a brave face and say, 'I'm doing great.'”
- Rick, real MS patient

Selected Important Safety Information

Before taking AMPYRA® (dalfampridine), tell your doctor if you:
• have kidney problems or any other medical conditions
• are taking compounded 4-aminopyridine
• are taking any other prescription or OTC medicines, such as cimetidine
• are pregnant or plan to become pregnant. It is not known if AMPYRA will harm your unborn baby.
• are breastfeeding or plan to breastfeed. It is not known if AMPYRA passes into your breast milk. Talk with your healthcare provider about the best way to feed your baby if you take AMPYRA.

Please see Important Safety Information on page 10.
DO YOU HAVE WALKING DIFFICULTY?

Answer the questions below. If you answer “Sometimes” or “A lot” to one or more of these questions, you may have walking difficulty.

Call your doctor today. The AMPYRA® (dalfampridine) FREE* 60-day trial might be right for you.

*Limitations and restrictions apply.

GET REAL ABOUT YOUR WALKING

1. Since developing MS, have you noticed that your walking is getting worse?
   - Not at all
   - Sometimes
   - A lot

2. Have you noticed that your walking makes it difficult to keep up with friends or family members?
   - Not at all
   - Sometimes
   - A lot

3. Have you ever found yourself late for an appointment, missed a train or bus because you couldn’t walk fast enough?
   - Not at all
   - Sometimes
   - A lot

4. Are there days or periods of time when your walking is noticeably slower?
   - Not at all
   - Sometimes
   - A lot

5. Are you having trouble making it in time to the bathroom or to answer the phone or doorbell?
   - Not at all
   - Sometimes
   - A lot

Selected Important Safety Information

Stop taking AMPYRA and call your doctor right away if you have a seizure while taking AMPYRA. You could have a seizure even if you never had a seizure before. Your chance of having a seizure is higher if you take too much AMPYRA or if your kidneys have a mild decrease of function, which is common after age 50. Your doctor may do a blood test to check how well your kidneys are working before you start AMPYRA.

Please see Important Safety Information on page 10.
Results from two clinical studies show AMPYRA® (dalfampridine) MADE A REAL DIFFERENCE IN WALKING

“Taking my walking pill has become a very important piece of my life. I can walk faster than I did before I started taking AMPYRA.”
- Bambi, real MS patient

In both groups, patients who walked faster also reported improvements in walking-related activities:

- Standing
- Ability to run
- Need for support indoors
- Need for support outdoors
- Walking speed
- Concentration needed to walk
- Maintaining balance
- Climbing stairs
- Walking distances
- Effort needed to walk
- Ability to walk
- Gait

Most Common Side Effects
- Urinary tract infection
- Nausea
- Headache
- Trouble sleeping
- Weakness
- Back pain
- Multiple sclerosis relapse
- Burning, tingling, or itching of your skin
- Irritation in your nose and throat
- Constipation
- Indigestion
- Pain in your throat

Not every patient responds to AMPYRA. Individual patient response to therapy may vary.

GET PERSONAL, 1-TO-1 SERVICE FROM AMPYRA PATIENT SUPPORT SERVICES (APSS)

“The APSS representative went through with me what the cost would be if I continued on AMPYRA... She was very helpful and I really appreciate the AMPYRA patient support that you provide.”

- Real patient feedback about APSS

APSS will:

• Set up your free* 60-day trial.
• Determine if you are eligible for co-pay assistance.
• Arrange for a specialty pharmacy to deliver AMPYRA right to your door.
• Help ensure you work with the same representative every step of the way.

*Limitations and restrictions apply.

Selected Important Safety Information

AMPYRA should not be taken with other forms of 4-aminopyridine (4-AP, fampridine), since the active ingredient is the same.

Please see Important Safety Information on page 10.
Important Safety Information

Do not take AMPYRA® (dalfampridine) if you:

• have ever had a seizure,
• have certain types of kidney problems, or
• are allergic to dalfampridine (4-aminopyridine),
  the active ingredient in AMPYRA.

Take AMPYRA exactly as prescribed by your doctor.

Before taking AMPYRA, tell your doctor if you:

• have kidney problems or any other medical conditions
• are taking compounded 4-aminopyridine
• are taking any other prescription or OTC medicines,
  such as cimetidine
• are pregnant or plan to become pregnant. It is not known if
  AMPYRA will harm your unborn baby.
• are breastfeeding or plan to breastfeed. It is not known if
  AMPYRA passes into your breast milk. Talk with your
  healthcare provider about the best way to feed your baby if
  you take AMPYRA.

Stop taking AMPYRA and call your doctor right away if you have a
seizure while taking AMPYRA. You could have a seizure even if you
never had a seizure before. Your chance of having a seizure is
higher if you take too much AMPYRA or if your kidneys have a
mild decrease of function, which is common after age 50. Your
doctor may do a blood test to check how well your kidneys are
working before you start AMPYRA.

AMPYRA should not be taken with other forms of 4-aminopyridine
(4-AP, fampridine), since the active ingredient is the same.

AMPYRA may cause serious side effects, including severe allergic
reactions. Stop taking AMPYRA and call your doctor right away or
get emergency medical help if you have shortness of breath or
trouble breathing, swelling of your throat or tongue, or hives.

The most common side effects for AMPYRA in MS patients were
urinary tract infection; trouble sleeping; dizziness; headache;
nausea; weakness; back pain; problems with balance; multiple
sclerosis relapse; burning, tingling, or itching of your skin;
irritation in your nose and throat; constipation; indigestion;
and pain in your throat.
